SUMMARY

Master's student in Global Software Development at Fulda University of Applied Sciences, seeking a mandatory internship in software engineering or applied AI. Full-stack experience with TypeScript, React, and Node.js from a semester-long team project, plus a self-directed project building a local, privacy-first RAG pipeline with LangChain, Ollama, and ChromaDB. Comfortable working in Git-based, code-review-driven workflows within cross-functional teams.

TECHNICAL SKILLS

AI & Machine Learning: Python, LangChain, RAG pipelines, Ollama (local LLMs), ChromaDB, scikit-learn (k-means, decision trees, random forest), sentence-transformers, PyTorch

Full-Stack Development: TypeScript, ReactJS, Node.js, FastAPI, Java Spring Boot, Django

Cloud, Data & DevOps: Docker, MySQL, PostgreSQL, Nginx, GitHub Actions, CI/CD, Git, Azure

Languages: English (C1 – Fluent), German (A2)

EXPERIENCE

Machine Learning Intern

June 2022 – December 2022

SmartKnower

- Analyzed an internal HR-style dataset (salaries, experience levels, department metrics) to extract workforce insights, applying and comparing scikit-learn models: k-means clustering, decision trees, and random forest.
- Presented findings to internal reviewers, who evaluated accuracy and walked through each algorithm's internal mechanics (e.g., split criteria in trees, centroid updates in k-means).
- Built a working understanding of feature engineering and the trade-offs between model interpretability and predictive performance.

PROJECTS

Agentic RAG Proof-of-Concept (Local LLM Integration)

April 2026 – Present

- Built a fully local, privacy-first RAG pipeline using LangChain and Ollama (Llama 3 / Mistral), so document Q&A never leaves the machine or hits an external API.
- Implemented ingestion (PyPDFLoader + RecursiveCharacterTextSplitter, 1000-char chunks) and local embeddings via sentence-transformers, storing vectors in ChromaDB.
- Connected retrieval to generation with LangChain's retrieval chain and exposed it via a FastAPI POST /ask endpoint returning grounded answers about local documents.
- Currently extending the system with agentic tool-calling (e.g., calculator, SQL query functions) beyond the base retrieval flow.

Way2Home (Full-Stack Web Application)

Oct 2024 – Mar 2025

- Served as GitHub Master on a 7-person agile team building a rental platform connecting students and landlords, defining branching/commit conventions and enforcing PR review policy across roughly 20 scoped functional requirements.
- Built the Save Search feature end-to-end and reviewed peer PRs, including authentication and media-upload flows, on a Node.js/React stack with a MySQL database.
- Contributed to deployment on an Azure VM (Nginx, GitHub Actions CI/CD) and took part in weekly milestone reviews and code-review cycles over a full semester.

Smart Restaurant OS (NLP & Real-Time System)

Jan 2023 – May 2023

- Built a decoupled application with a Django REST Framework backend and a component-based frontend for restaurant operations.
- Added an NLP pipeline to score live customer feedback for sentiment, giving a basic signal for tracking satisfaction over time.
- Containerized the backend and ML components with Docker to keep local testing consistent with deployment.

EDUCATION

Fulda University of Applied Sciences

October 2024 – Present

Master's in Global Software Development (Eligible for Mandatory Internship)

Fulda, Germany

Muffakham Jah College of Engineering & Technology

August 2019 – June 2023

B.E in Information Technology

Hyderabad, India
